WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** VERY hot, dry conditions will continue a few more days, still hot, dry, but a gradual cooling trend this weekend/early next week. *****

The airmass over Northern California will remain quite hot and dry as strong high pressure persists over California into next week. No thunderstorms are expected, but there may be a few afternoon cumulu cloud buildups over our northern and eastern mountains today. Temperatures will be as much as around 10 degrees above normal for the next few days followed by a gradual cooling trend this weekend by a few degrees each day into early next week. The warmest inland areas will continue to have afternoon highs above 100 for the next 7 days. There will be some gusty W to NW winds each day over the Coast Range into the western Sacramento Valley and through The Delta region through at least Saturday. Elsewhere across the region, winds will mostly be quite light with local terrain driven, diurnal patterns prevailing. Coastal areas will be under the influence of a rather shallow marine layer with a fairly light onshore flow, but the marine layer may deepen a little early next week and reach a little further inland then.

SOUTHERN CALIFORNIA

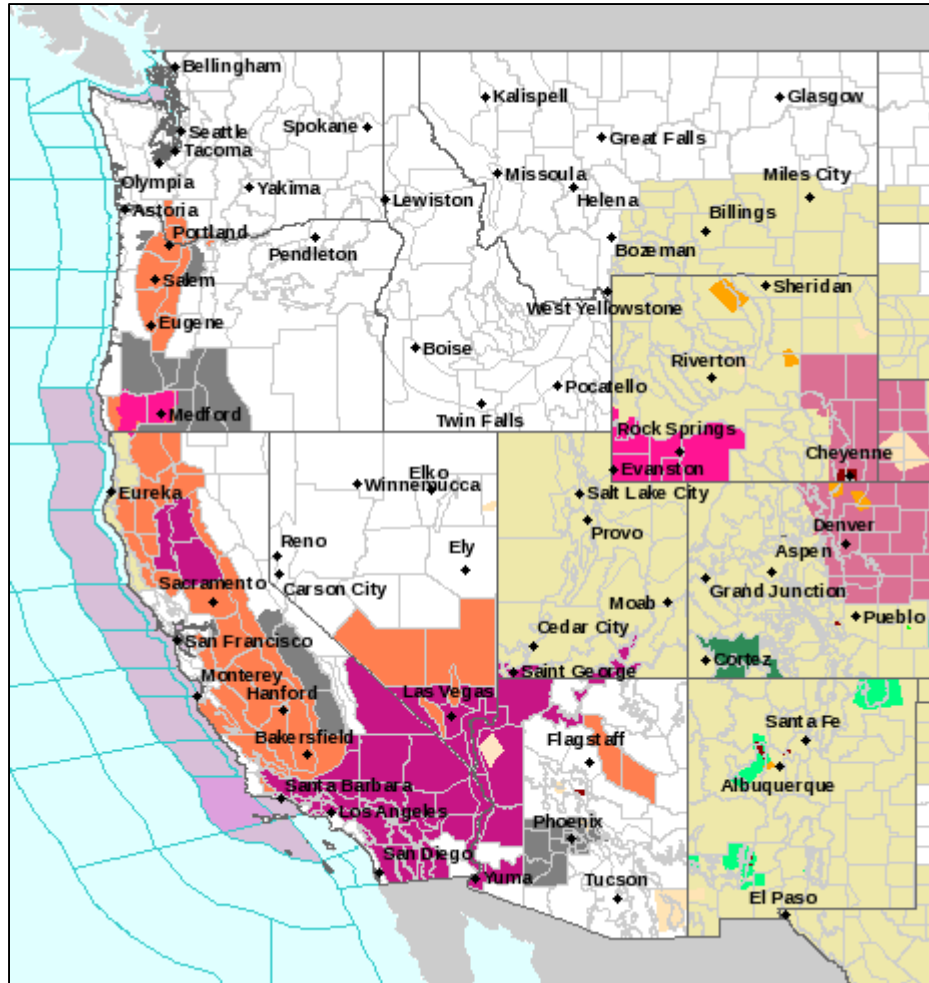

*****Isolated wet thunderstorms in the Sierras and on the east side of the San Bernardino, Cleveland N.F. this afternoon*****

*****Minor cooling trend, but temperatures expected to remain above normal through the end of next week*****

Onshore flow has returned which will bring some cooling to the coast and a few intermediate valleys today into the weekend. But the valleys and lower foothills will still see temperatures of 100-104 through Saturday before temperatures drop back into the 90s next week. There has been a slight increase in moisture over Southern California early this morning which will allow isolated wet thunderstorms to develop this afternoon on the east side of the San Bernardino and Cleveland N.F. – including areas near the Cranston Fire. Isolated thunderstorms will be possible near the Sierra Crest today as well, but Central California will see a drying trend the next few days which should bring an end to convection north of Kern County. Minimum RH will briefly drop into the teens during the afternoon the next two days across northern sections of Los Angeles County and the Kern County Mountains and some interior valleys of the central coast. This weekend into early next week, high pressure will shift slightly eastward which may generate an increase in wet thunderstorm coverage over Southern California. Thunderstorms may reach further west to include Ventura and Los Angeles Counties by next Sunday or Monday. Meanwhile, Central California will be much drier with RH dropping into the 10-15% range over a wide area by Monday. Expect northwest winds of 10-20 mph along the central coast and southwest winds of 15-30 mph in the desert interface regions each afternoon.
